PROFILE

ML Engineer and Data Scientist with a strong academic background in AI and a track record of delivering end-to-end machine learning systems in production across pharmaceuticals, critical infrastructure, and consulting. Core strengths lie in classical ML, computer vision, and time-series modelling — complemented by hands-on experience with modern generative AI and LLM systems. Comfortable working close to the research frontier: from fine-tuning state-of-the-art models to designing novel methods (XR locomotion, real-time anomaly detection). Driven by curiosity, rigorous in execution.

EXPERIENCE

Forward Deployed AI Engineer

GSK (via Cognizant) · Full-time

Feb 2025 – Present · Wavre, Belgium · Hybrid

- Work directly with stakeholders to turn complex operational challenges into reliable, production-grade AI products.
- Lead end-to-end delivery across classical ML and generative AI, spanning discovery, modelling, engineering, deployment, and user adoption.
- Develop solutions for pharmaceutical manufacturing, including predictive forecasting, real-time anomaly detection, and retrieval-augmented generation systems.

Associate – Data Science Community

Cognizant · Full-time

Jan 2025 – Present · Brussels, Belgium · Hybrid

- Active contributor to Cognizant's global Data Science community; presenting current projects and co-developing AI engineering best practices.

AI & Cybersecurity Consultant

HeadMind Partners · Full-time

Sep 2024 – Jan 2025 · Brussels, Belgium · Hybrid

- Designed enterprise AI cybersecurity awareness programmes; prototyped RAG document retrieval applications.
- Researched and developed deepfake generation & detection models.

AI Engineer

Infrabel – Emerging ICT Team · Internship

Jan 2024 – Jun 2024 · Brussels, Belgium · Hybrid

- Fine-tuned YOLO models on custom-annotated datasets (LabelStudio & FiftyOne) for automated railway component defect detection.
- Implemented AIOps ML pipelines in ElasticSearch for predictive maintenance of critical server infrastructure.
- **Novel contribution:** Designed a hand-gesture VR locomotion system in Unity/C# that measurably reduces motion sickness.

Programming & AI Teacher

Logischool Ltd. · Part-time

Sep 2021 – Present · Brussels, Belgium

- Teaching ML/AI fundamentals, Python, JavaScript & Unity/C# to learners aged 6–18 via project-based curricula.

IT Manager

Solvay Consulting Club · Self-employed

Aug 2022 – Sep 2023 · Brussels, Belgium

- Fully rebuilt the website; attended to workshops with BCG, Roland Berger, Capgemini & Deloitte.

TECHNICAL SKILLS

Machine Learning

Scikit-learn · PyTorch · TensorFlow · Time-series · Anomaly Detection · Predictive Modelling

Computer Vision

YOLO · Object Detection · Model Fine-tuning · LabelStudio · FiftyOne

Generative AI & LLMs

HuggingFace · LangChain · RAG · Fine-tuning · Stable Diffusion · Prompt Engineering

MLOps & Cloud

Azure ML · ElasticSearch · Docker · Git · CI/CD

Data Engineering

Pandas · PySpark · SQL · Vector Databases

Coding Assistants

Claude Code · GitHub Copilot · Codex

Programming Languages

Python · JavaScript · C# · SQL · Bash · Lisp-family

XR & Game Development

Unity · Godot · Azure DevOps · Webflow

EDUCATION

M.Sc. Engineering: Computer Science – AI · Cum Laude

Vrije Universiteit Brussel (VUB)
2021 – 2024 · GPA 76%

B.Sc. Computer Science

Vrije Universiteit Brussel (VUB)
2018 – 2021

LANGUAGES

French – Native (C2)

Dutch – Native (C2)

English – Professional (C2)

German – Elementary (A2)

KEY PROJECTS

- Time-series Forecasting & Anomaly Detection @ GSK
- AIOps Predictive Maintenance @ Infrabel
- YOLO Fine-tuning – Railway Defect Detection @ Infrabel
- RAG Anomaly Platform @ GSK
- VR Hand-Gesture Locomotion @ Infrabel (novel method)
- Deepfake Detection & Generation @ HeadMind
